Data Dictionary for QBRs

Overall Program Performance Metrics

		2024 Q4	2024 Q3	QoQ	2023 Q4	YoY	Median Benchmark	75th Percentile Benchmark
Acquisition	Sign Ups	288,815	255,948	12.84%	191,311	50.97%	-8.03%	4.85%
	Unique Guests	393,739	361,084	9.04%	212,019	85.71%	1.81%	9.04%
Engagement	Loyalty Sales	$17,921,256	$15,216,016	17.78%	$8,779,038	104.14%	1.72%	6.64%
	Loyalty Transactions	1,386,948	1,174,002	18.14%	644,750	115.11%	1.30%	6.37%
	Average Checkin Frequency	3.52	3.25	8.34%	3.04	15.83%	2.80	3.64
	Average Checkin Net Purchase Amount	$12.92	$12.96	-0.30%	$13.62	-5.10%	0.16%	2.96%
	Spend Lift	-17.28%	-15.99%	NA	-9.05%	NA	2.84%	11.85%
	Participation Rate	6.14%	5.16%	19.03%	2.57%	139.01%	9.45%	21.49%
	Average Discount %	27.83%	23.18%	20.07%	23.13%	20.34%	11.71%	15.84%
Advocacy	Referral % of Signups	0%	0%	0.00%	0%	0.00%	37.00%	44.19%
Retention	Retention Rate	34.18%	33.45%	2.20%	30.44%	12.30%	1.25%	2.17%

Signups: Total number of users who have joined loyalty program via app, website, etc. in the specified duration.

Unique Guests: The number of discrete loyalty users who have made at least one loyalty checkin in the specified duration.

Loyalty Sales: The total amount of sales attributed to loyalty checkins across all channels where a loyalty user made a purchase in the specified duration. This is net spend. Note that the Loyalty Sales can be based on Earnable Amount (which is the amount excluding non-earnable menu item) or Receipt Amount, depending on the selection you made

Loyalty Transactions: The number of transactions or checkins made through the loyalty program.

Average Checkin Frequency: The average number of checkins that loyalty users who *earned* points (checked in 1+ times) during the quarter. Calculation is: Total Loyalty Checkins / Unique Guests who checked in

Average Checkin Net Purchase Amount: The dollar amount per loyalty transaction in the specified duration.

Spend Lift: Increase in check size of loyalty users when compared to anonymous. To ensure outliers don't skew the data, individual locations with monetary lift less than -30% and greater than 90% will not be included in aggregated values.

> *Formula: (Avg loyalty check size - avg anonymous check size) / Avg anonymous check size*

Important Note: Spend Lift – QoQ/YoY % Change Not Applicable (NA)

Spend Lift is a derived performance metric expressed as a percentage, representing the relative increase or decrease in spend compared to a defined baseline (comparison of a loyalty check size and an anonymous check size).

Because Spend Lift itself is already a percentage and can take both positive and negative values, calculating a quarter-over-quarter (QoQ) or year-over-year (YoY) percentage change can produce mathematically distorted or misleading results, particularly when prior-period values are close to zero or change direction (e.g., from negative to positive). In such cases, the calculated % change may overstate performance shifts or be difficult to interpret in a meaningful business context.

To avoid confusion and ensure clarity in reporting, QoQ and YoY percentage changes for Spend Lift are therefore designated as ***Not Applicable (N/A)****. Stakeholders should instead evaluate period-over-period performance by reviewing the absolute change in Spend Lift (percentage point difference) rather than calculating a percentage change on the metric itself.*

Participation Rate: Percent of POS transactions made by loyalty members who checked in (if they did not check-in but are part of the loyalty program, they are not counted). To ensure outlier's don't skew data, locations with participation rate greater than 90% are not considered.

> *Formula : (Total Loyalty Receipts / Total Receipts in POS)∗100*

Average Discount %: Total discount amount availed by users through Loyalty rewards, campaign rewards or through others means (where the discount can be tied back to a user)/Total Loyalty Sales (based on Earnable Amount) in the period under consideration.

It includes all Redemptions including Currency redemptions that can be tied back to a usr. Note that some Promo and Coupons where a redemption cannot be tied back to a user will not be considered in the calculation of the Average Discount %.

Loyalty Customer Retention Rate: The % of loyalty users who made at least one checkin in the quarter under consideration among those loyalty users who made at least one checkin in four quarters prior to the quarter under consideration.

> Example: For a business looking at the Loyalty Customer Retention Rate for 2021Q1, let's say 2,000 loyalty users made at least one loyalty transaction (checkin) between 2020Q1 and 2020Q4. Out of these 2,000 users, let's say 150 users made a loyalty transaction (checkin) in 2021Q1 (which is the quarter under consideration). In this case, the Loyalty Customer Retention Rate = (150/2000)∗100 = 7.5%.
>
> This method overcomes the problem of users who signup and also make the first loyalty transaction in the quarter under consideration

Referral % of Signups: The % of Signups in the period under consideration that came from the users who were referred by existing Loyalty members, with the referred users having made their first transaction in the period under consideration.

Benchmark mapping: See image below to understand what numbers to compare for teach metric in relation to the benchmark.

Benchmark Comparison Key

		2024 Q4	2024 Q3	QoQ	2023 Q4	YoY	Median Benchmark	75th Percentile Benchmark

Member Analysis: Active

P4R Engagement

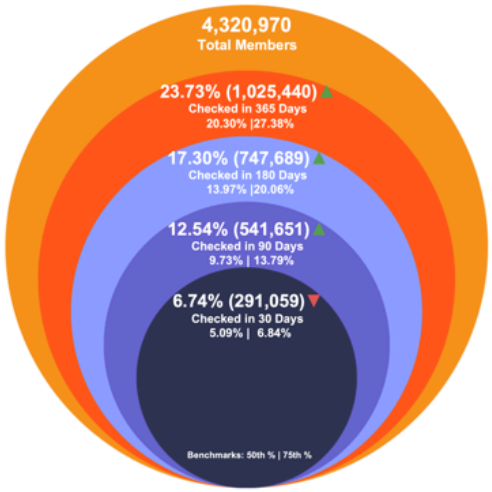
Member Analysis: Active

Program Age Benchmark Cohort: More than 7 Years

In the second quarter of 2025, the loyalty program had a total of 4,320,970 members. Of these, 1,025,440 members were active in the last 365 days, representing approximately 23.7% of the total membership. Short-term engagement was lower, with 291,059 members active in the last 30 days (about 6.7% of total members), 541,651 active in the last 90 days (around 12.5%), and 747,689 active in the last 180 days (about 17.3%). The data indicates a decline in activity as the timeframe shortens, suggesting a potential drop-off in member engagement over time.

5.83%
change in percentage of guests active within the last 90 days over the previous 90 days

27.32%
change in percentage of guests active within the last 365 days over the previous 365 days



Checked in 30 Days: % of total Loyalty Users who made a Loyalty transaction (checkin) in the 30 day period prior to the last day of the quarter under consideration

Checked in 90 Days: % of total Loyalty Users who made a Loyalty transaction (checkin) in the 90 day period prior to the last day of the quarter under consideration

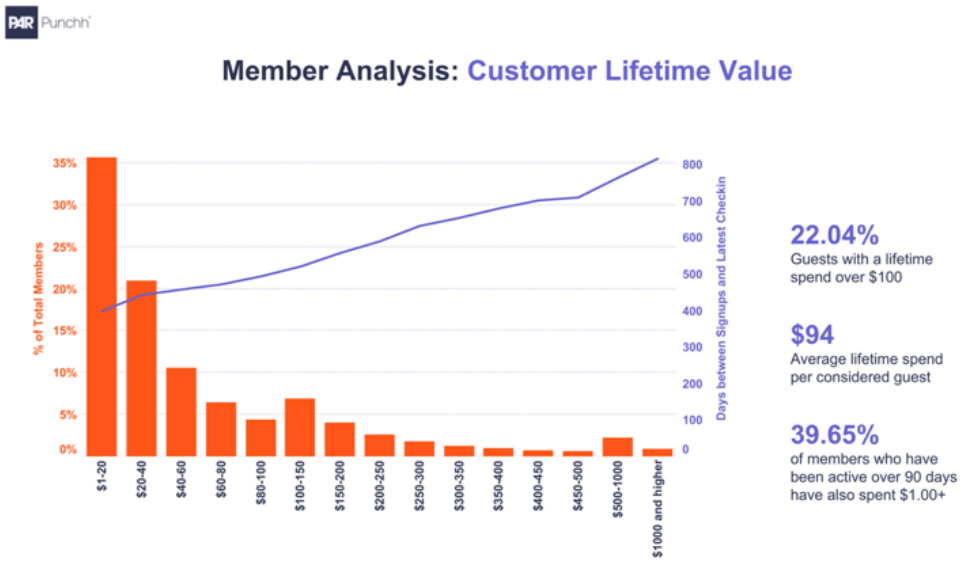
Checked in 180 Days: % of total Loyalty Users who made a Loyalty transaction (checkin) in the 180 day period prior to the last day of the quarter under consideration

Checked in 365 Days: % of total Loyalty Users who made a Loyalty transaction (checkin) in the 365 day period prior to the last day of the quarter under consideration

Total Members: The count of Loyalty User base for the brand

Benchmarking cohorts are reflective of loyalty program age (cohorts: <1 year, 1-2 years, 2-3 years, 3-5 years, 5-7 years, 7+ years). 50th percentile benchmarks on the lefthand side underneath “checked in X days”, and 75th percentile benchmarks on righthand side. The age of a brand on the platform is calculated based on the time period between the Go Live Date for the brand and the last day of the quarter under consideration. Important Note: We always show the cohort based on current age, irrespective of which quarter you selected to view the QBR for.

Member Analysis: Customer Lifetime Value



There are multiple steps to arrive at the metrics shown in the above graph:

- First, the list of all users who joined the program 90 days prior to the last day of the quarter under consideration is considered (A)

- Out of this cohort, the users who did at least one loyalty transaction contributing to at least $1 spend (based on checkin earnable amount) before the last day of the quarter under consideration since joining the loyalty program, is considered (B)
- In this cohort, the % of users in each category of lifetime spend (based on checkin earnable amount) is calculated and divided with the total user count in the cohort calculated above (B)
- The purple line graph represents the days between signup and the most recent checkin for a user. This is done to avoid counting the number of days a user has lapsed. This effectively will now show the average number of days that it took for each spend group to reach the overall spend level (overall spend level being the red bar).

Overall this graph shows the lifetime spend of users depending on how much they spent, and also shows how long the user has been part of the program

Get all Users who have signed up in the **last 12 months**

Signups : Get all Users who have signed up in the last 12 months

1 Transactions: All Users who have signed up in the last 12 months and have checkin count >= 1

2 Transactions: All Users who have signed up in the last 12 months and have checkin count >= 2

3 Transactions: All Users who have signed up in the last 12 months and have checkin count >= 3

5 Transactions: All Users who have signed up in the last 12 months and have checkin count >= 5

10 Transactions: All Users who have signed up in the last 12 months and have checkin count >= 10

Avg Days Between Transactions (Left Side)

Average days it takes to achieve next transaction level

example : **average** date difference from **signup** date to **1st checkin** for **all users**

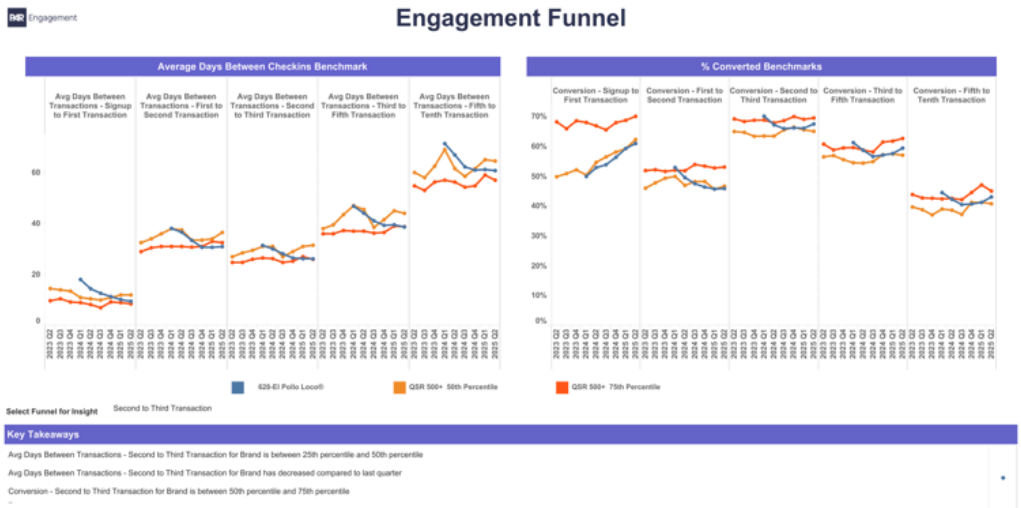
Formula : avg(datediff(DAY, join date, 1st checkin))

Conversion Rate (Right Side)

Percentage of users that achieve next transaction level

Formula : All Users who have signed up in the last 12 months and have checkin count >= 1 **/** All Users who have signed up in the last 12 months

Engagement Funnel



Average Days Between Checkins Benchmark: Purple line indicates the brand's average days between transactions (signup to first, first to second, second to third, third to fifth, fifth to tenth) across quarters.

% Converted Benchmarks: Purple line indicates the brand's percentage of customers converted (signup to first, first to second, second to third, third to fifth, fifth to tenth) in terms of transactions across quarters.

Member Analysis: Frequency Cohorts

Loyalty Checkin Frequency: Range of loyalty checkin categories i.e. 1, 2-3,..,11+ etc based on the activity in the quarter under consideration

% of Unique users: # of Unique Loyalty users in the category/Total Unique Loyalty Users in the duration. Adding the entire column should give you 100%. This metric is shown for current quarter and previous quarter

Unique users: The number of discrete loyalty users who have made at least one loyalty checkin and fall into frequency category. This metric is shown for current quarter and previous quarter

% of Loyalty Checkins: # of transactions made by loyalty users in this bucket/Total loyalty checkins for the quarter (an upward and downward arrows indicates an increase and decrease since last quarter)

Loyalty Checkins: The number of transactions made by loyalty users in this bucket

% of Loyalty Sales: The total amount of net sales attributed to loyalty checkins across all channels by loyalty users in the category/Total loyalty sales for the quarter (an upward and downward arrows indicates an increase and decrease since last quarter)

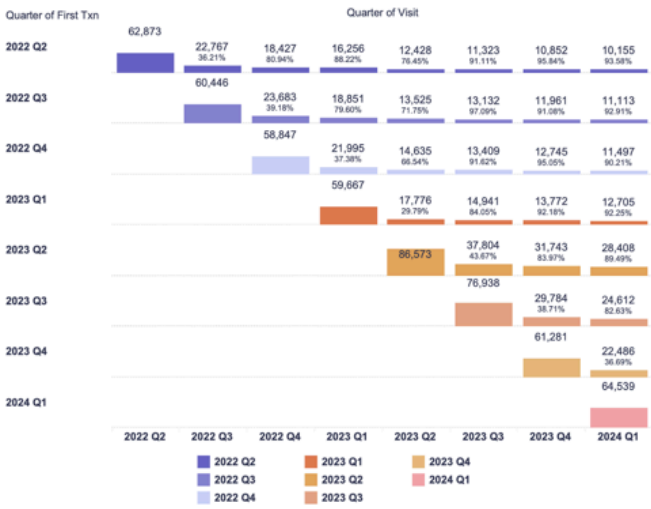
Loyalty Sales: The total amount of net sales attributed to loyalty checkins across all channels by loyalty users in the category

Average Check: Loyalty Sales/Loyalty Checkins for each bucket (an upward and downward arrows indicates an increase and decrease since last quarter)

Note: For the 50th and 75th percentile benchmarks, adding the values will not give you 100% because each benchmark is calculated at the checkin frequency level.

In this slide, Transactions with zero or negative receipt amounts are excluded.

Member Analysis: Retention Cohort



Customer Retention Cohort: The chart shows the total number of customers who made their first visit in a quarter and their subsequent retention (at least one loyalty checkin) in the following quarters.

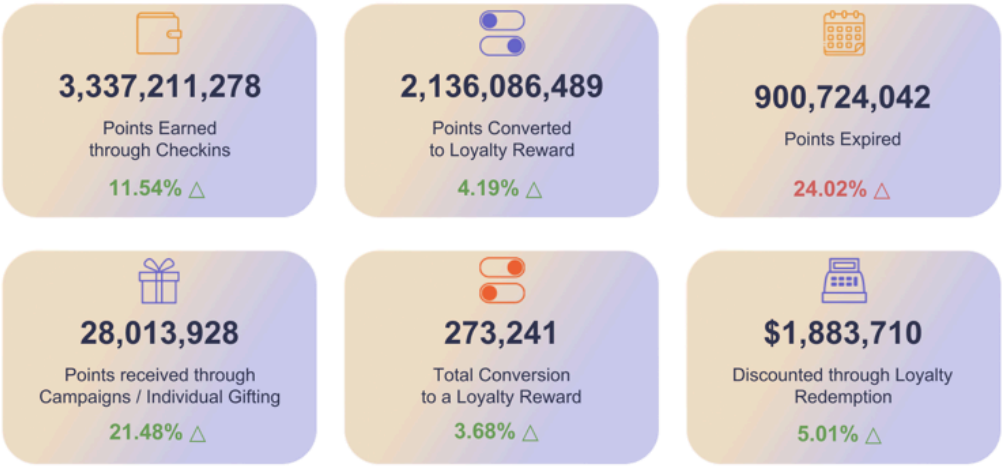
Data is shown for 2 years.

Year/Quarter of Customer acquisition date: date when user made first loyalty check-in (and not based on signup)

% Calculation: % is calculated as users who have visited in current quarter divided by users visited in previous quarter. There might be scenarios wherein % is more than 100 as there can be certain users who didn't visit last quarters but visited now because of a campaign or some other reason.

Alternative version of the slide: percentages compare number of members in that cohort against the number of members in the original cohort (rather than a comparison to the previous quarter).

Core Loyalty: Activity Summary



Points Earned Through Checkins: Represents the points earned by loyalty users through Checkins in the given quarter under consideration. Does not include points gifted etc.

Points Converted to Loyalty Rewards: Represents the points converted to a Loyalty Reward in the quarter under consideration, irrespective of when the points were earned. Also note that the Loyalty Reward may or may not have been redeemed, and it is not taken into consideration here. For Visits based program, you can use “Visits” instead of “Points”.

Points Expired: Represents the points expired in the quarter under consideration. These points may have been earned through Checkins or user may have received through gifting or any other means (the QoQ % change in case of point expired is green if it decreased and red if it increased)

Points Earned Through Campaigns/Individual Gifting: Represents the points received by users through Campaigns or through Admin Gifting among others, in the given quarter under consideration.

Total Conversions to a Loyalty Reward: Represents the total number of Loyalty Rewards that user received in the quarter under consideration by converting points in the account. These points may come from earning through Loyalty Checkins or Campaigns or any other means.

Discounted through Loyalty Redemptions: Represents the dollar amount of discount availed by the loyalty user by redeeming Loyalty Rewards, in the quarter under consideration.

Core Loyalty: Points Unlock Rewards Summary

P4R Engagement

Core Loyalty: Point Unlock Rewards Summary

The highest redeemed loyalty reward is $5 Off Any Order, representing 36.58% of Total Honored Redemptions in Q2 2025.

Also notable is that the reward with the highest discount rate is Free Double Chicken Tostada at an average discount of 55%.

	Point Level	Total Points Converted	Honored Redemptions	Average Discount $	Average Discount %	Average Check $
$5 Off Any Order	6,500	649,720,500	99,957	$5.00	24%	$20.88
$10 Off Any Order	12,500	426,625,000	34,130	$9.97	28%	$35.21
Free Large Drink	3,500	75,726,000	21,636	$3.57	22%	$16.16
Free Churros	3,500	71,967,000	20,562	$3.15	17%	$18.72
Free Double Chicken Tostada	12,500	231,350,000	18,508	$12.51	55%	$22.60
All Other Point Unlock Rewards	NA	680,819,500	78,461	$8.54	42%	$20.11

HONORED REDEMPTION DISTRIBUTION

Point Level - Represents the point threshold level for each Redeemable configured. For point based rewards program, you would only see on row, whereas for Point Unlock Redeemable, you would see multiple rows

Total Points Converted - Represents the total points converted into loyalty rewards for the corresponding Loyalty Redeemable in the quarter under consideration

Honored Redemptions - Represents the total successful loyalty redemptions made by the loyalty user for the corresponding Loyalty Redeemable in the quarter under consideration

Average Discount $ - Represents the average discount amount per loyalty redemption made by the loyalty user for the corresponding Loyalty Redeemable in the quarter under consideration

Average Discount % - Represents the discount amount as % of gross sales for the loyalty redemptions made by the loyalty user for the corresponding Loyalty Redeemable in the quarter under consideration

Average Check - Represents the NET average check amount per loyalty redemption made by the loyalty user for the corresponding Loyalty Redeemable in the quarter under consideration

Core Loyalty: Membership Tier Performance

	# of Members in Tier	% Members in Tier	# of Members in Checked in this Quarter	Total Spend	Average Spend	Average Visits	Total Offer Redemptions	Cost of Offer Redemptions
Tier 1	7,491,250	88.65%	658,441	$23,107,545	$45.96	6.43	720,109	$3,604,716
Tier 2	699,668	8.28%	412,358	$22,455,075	$51.98	9.77	548,450	$2,808,937
Tier 3	259,058	3.07%	209,903	$24,449,913	$59.79	24.74	527,850	$3,022,337

 # Members in Tier - Represents the no.of loyalty users in the corresponding membership tier as of the last day of the quarter under consideration

% Members in Tier - Represents the % users out of all loyalty users who are in the corresponding membership tier as of the last day of the quarter under consideration

# of Members Checked in this Quarter - Represents the number of loyalty users in the corresponding membership tier as of the last day of the quarter under consideration, who made at least one loyalty transaction (Checkin) in the quarter under consideration

Total Spend - Represents the total spend (based on Checkin Earnable amount) by loyalty users in the corresponding membership tier as of the last day of the quarter under consideration, in the quarter under consideration

Average Spend - Total Spend/# of Members Checked in this Quarter for the corresponding membership tier. Membership tier of a user is decided by the user's membership as of the last day of the quarter under consideration

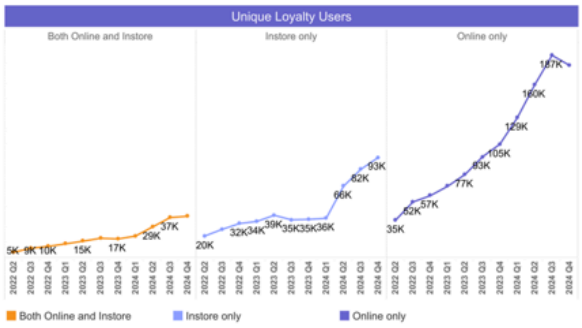
Average Visits - Total Loyalty Transactions (Checkins)/# of Members Checked in this Quarter for the corresponding membership tier. Membership tier of a user is decided by the user's membership as of the last day of the quarter under consideration

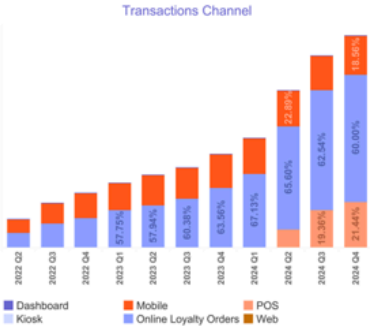
Total Offer Redemptions - Number of successful redemptions made by the loyalty users in the corresponding membership tier in the quarter under consideration. Membership tier of a user is decided by the user's membership as of the last day of the quarter under consideration

Cost of Offer Redemptions - $ value of discounts availed through successful redemptions made by the loyalty users in the corresponding membership tier in the quarter under consideration. Membership tier of a user is decided by the user's membership as of the last day of the quarter under consideration

Check-In Channel Metrics

Check-In Channel Metrics





Order Type : Order type can be either Online or Instore.

•**Online Only:** The number of users who have done only online loyalty checkins

•**Instore Only:** The number of users who have done only instore loyalty checkins.

The bar chart represents the transactions by channel

•**Mobile:** The number of visits via mobile app (scanned barcode on receipt after purchase). Note that if a transaction is placed via Mobile app (OLO), it is classified as Online Order and not as Mobile. Therefore, Mobile is channel that is tagged with transactions where user scans receipts using Mobile app to earn points, and excludes pure Online Orders

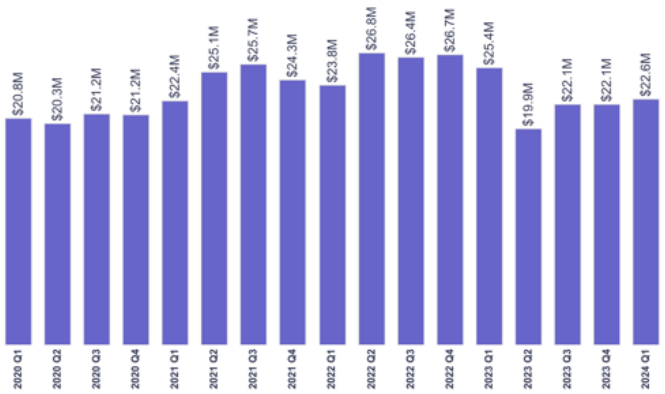
•**Online Order:** The number of visits via Online order through app or web when logged in as a loyalty user

•**POS:** The number of visits at POS - scanner or phone number earn via lookup

•**Web:** The number of visits earned through Web / iFrame

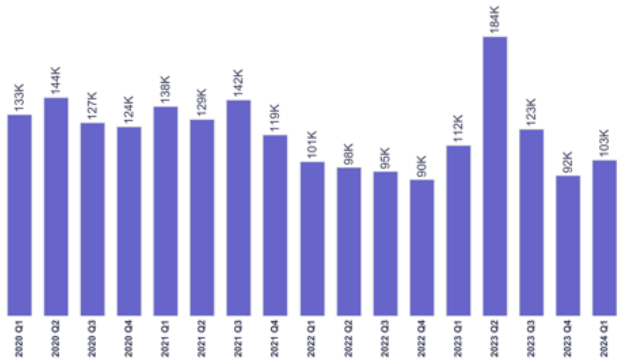
Note: *In this slide, Transactions with zero or negative receipt amounts are excluded.*

Important Trend: Loyalty Sales



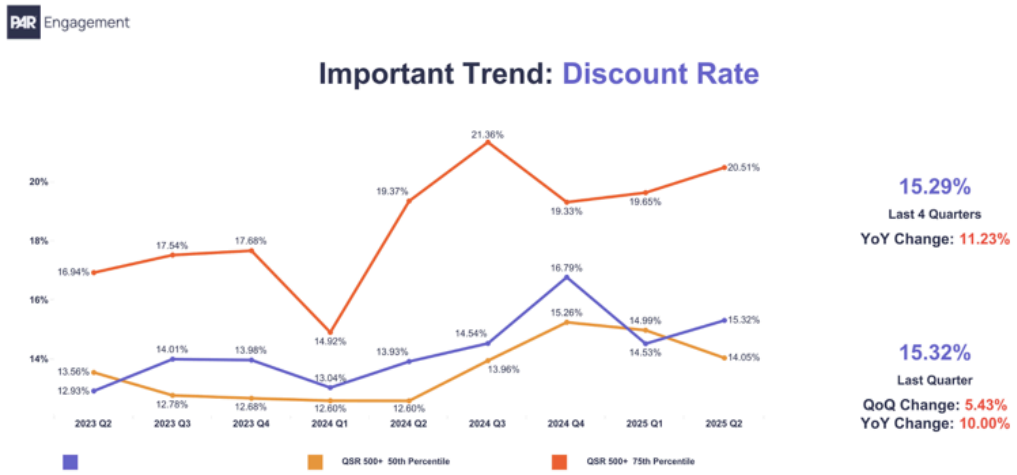
Loyalty Sales: The total amount of sales attributed to loyalty checkins across all channels where a loyalty user made a purchase in the specified duration. This is net spend.

Important Trend: Loyalty Signups



Signups: Total number of users who have joined loyalty program via app, website, etc in the specified duration.

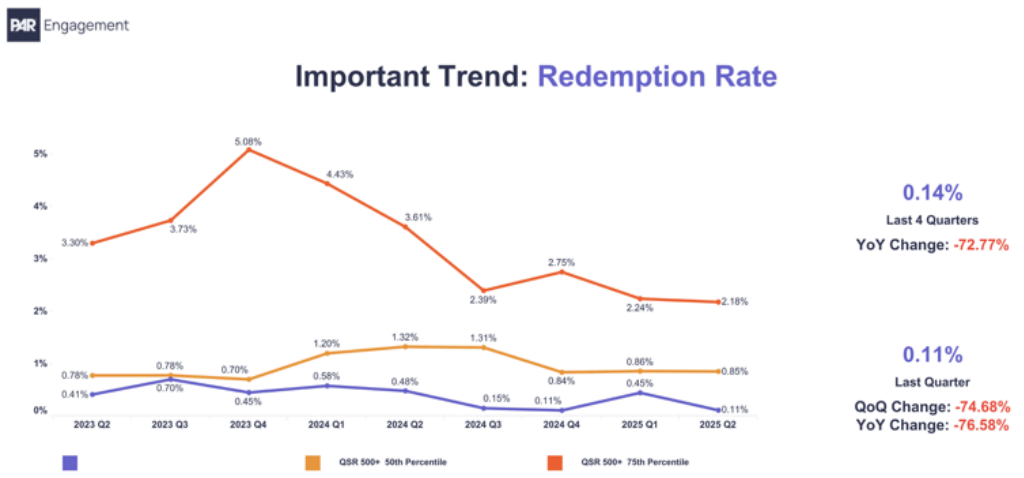
Important Trend: Discount Rate



Discount %: Ratio of the discounts given to loyalty user and the loyalty sales made by the user in the specified duration. (Includes discounts from Loyalty, Campaign, Promo, Coupons and Others)

X% Last 4 Quarters Formula: (Total Discount Availed in the last 4 quarters) / (Total Loyalty Sales in the last 4 quarters)

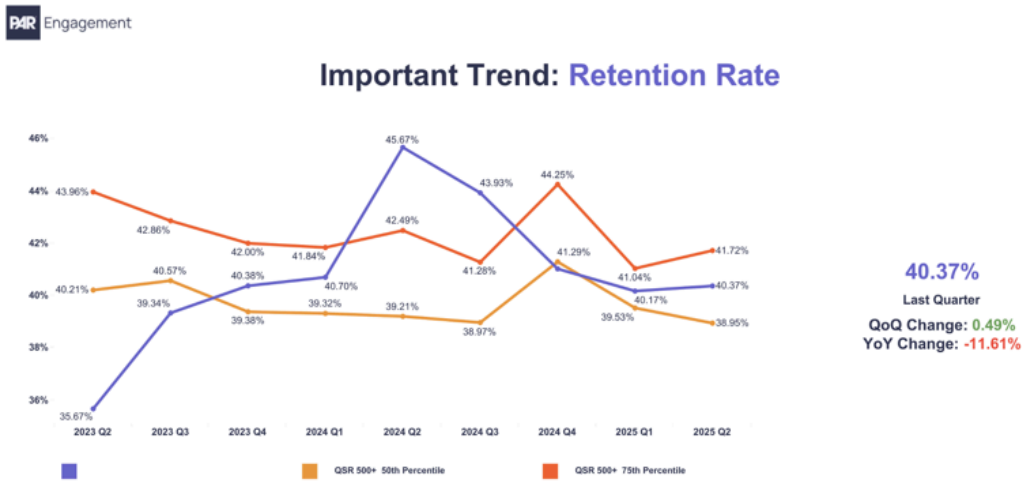
Important Trend: Redemption Rate



Redemption rate : Honored rewards/ Rewards gifted

X% Last 4 Quarters Formula: (Total Successful Redemption in last 4 quarters) / (Total Rewards in last 4 quarters)

Important Trend: Retention Rate

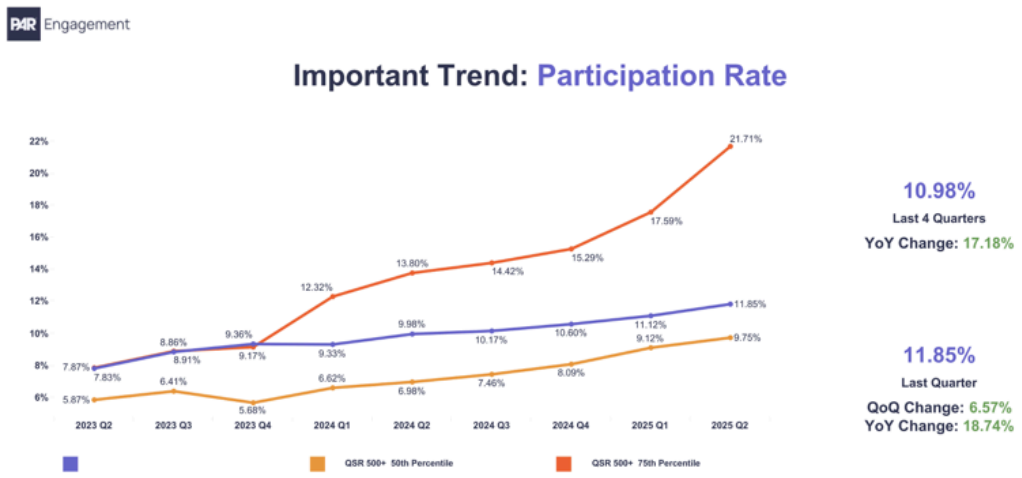


Loyalty Customer Retention Rate: The % of loyalty users who made at least one checkin in the quarter under consideration among those loyalty users who made at least one checkin in four quarters prior to the quarter under consideration.

Example: For a business looking at the Loyalty Customer Retention Rate for 2021Q1, let's say 2,000 loyalty users made at least one loyalty transaction (checkin) between 2020Q1 and 2020Q4. Out of these 2,000 users, let's say 150 users made a loyalty transaction (checkin) in 2021Q1 (which is the quarter under consideration). In this case, the Loyalty Customer Retention Rate = (150/2000)*100 = 7.5%.

This method overcomes the problem of users who signup and also make the first loyalty transaction in the quarter under consideration

Important Trend: Participation Rate

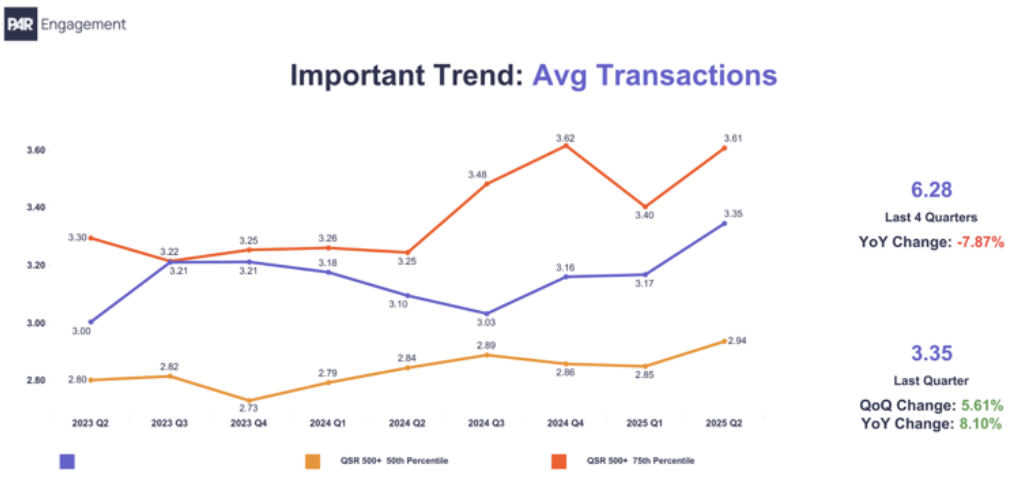


Participation Rate: Percent of POS transactions made by loyalty members who checked in (if they did not check-in but are part of the loyalty program, they are not counted). To ensure outlier's don't skew data, locations with participation rate greater than 90% are not considered.

> *Formula : (Total Loyalty Receipts / Total Receipts in POS)*100*

X% Last 4 Quarters Formula:(Total Loyalty Transactions in last 4 quarters) / (Total Transactions in the last 4 quarters) after accounting for above mentioned outliers

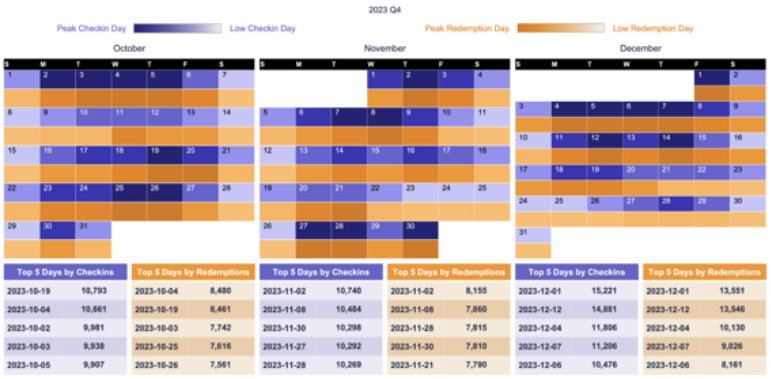
Important Trend: Average Transactions



Average Checkin Frequency: Total number of transactions made by loyalty users per users for which they have earned points/punches in the specified duration.

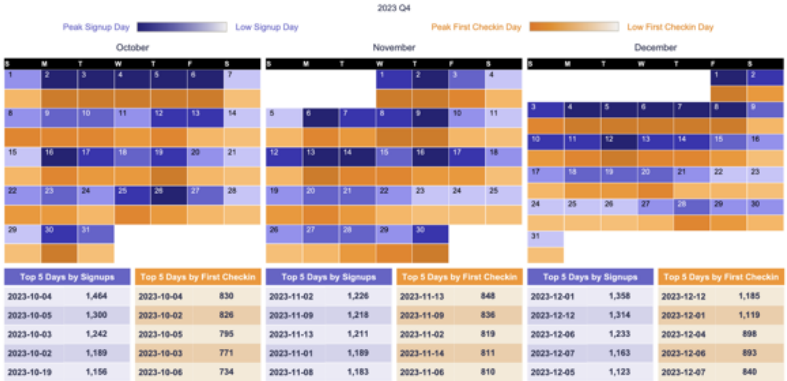
X% Last 4 Quarters Formula: (Total Loyalty Transactions in last 4 quarters) / (Total Unique Users who made checkin in last 4 quarters)

Checkin and Redemption Heatmap



Note: Data based on local time zone

Sign Up and First Checkin Heatmap



Note: Data based on local time zone

Top 3 Redeemables from Campaigns

	Honored Redemptions	%Redeemed	Discount%	Average Discount	Total Discount	Average Check $
$8 Classic Chicken Tostada	82,311	0.19%	18.54%	$3.03	$249,527.03	$16.35
$2 Off Any Fire-Grilled Chicken Burrito	61,837	0.02%	13.19%	$2.00	$123,674.00	$15.16
$10 3pc Leg & Thigh Meal	36,782	0.11%	12.52%	$2.00	$73,742.98	$16.02
All Other Campaign Redemptions	352,934	0.25%	26.71%	$6.50	$2,293,954.37	$24.33

Honored Redemptions - Represents the number of successful redemptions made by loyalty users for the corresponding Redeemable, in the quarter under consideration.

% Redeemed - (number of successful redemptions made for the corresponding Redeemable in the quarter under consideration)/(number of rewards disbursed for the corresponding Redeemable in the quarter under consideration)

Note that this number can be more than 100% depending on when the reward was disbursed and when the redemption is made

Discount % - ($ value of discount availed through successful redemptions made for the corresponding Redeemable in the quarter under consideration)/(Gross sales through successful redemptions made for the corresponding Redeemable in the quarter under consideration)

Average Discount - ($ value of discount availed through successful redemptions made for the corresponding Redeemable in the quarter under consideration)/(number of successful redemptions made for the corresponding Redeemable in the quarter under consideration)

Total Discount - $ value of discount availed through successful redemptions made for the corresponding Redeemable in the quarter under consideration

Average Check - Represents the NET average check amount through successful redemptions made for the corresponding Redeemable in the quarter under consideration

Campaigns that Influenced Peak Volume Days

December 12th

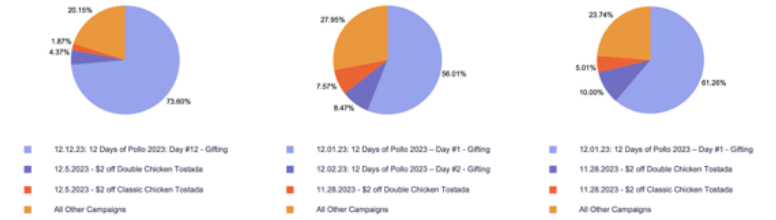
Checkins	20,318
Redemptions - 12.01.23: 12 Days of Pollo 2023 – Day #1 - Gifting	4,467
Redemptions - 11.28.2023 - $2 off Double Chicken Tostada	729
Redemptions - 11.28.2023 - $2 off Classic Chicken Tostada	365
Other Campaign Redemptions	1,731



There are several steps to arrive at these numbers:

- First, we look at the top 25 percentile of days with highest Loyalty transactions (Checkins)
- Among them, we pick the top 3 days that have the highest % of (Successful Redemptions made through Mass Gifting campaigns with Redeemable attached on a given day)/(Total Checkins on that day)
- Then we identify the top 3 Mass Gifting campaigns with Redeemables attached that contributed to the redemptions for each of the top 3 days

The pie chart shows the % break of successful redemptions from the Mass Gifting campaigns with Redeemables attached for each of the top 3 campaigns and the remaining campaigns

Note: Data based on business time zone

Platform Usage

Push Notifications - Represents the total no.of push notifications sent to users in the quarter under consideration. These PNs could be from Campaign or from Notification Template

Campaign Emails - Represents the total number of of emails delivered through Campaigns in the quarter under consideration

Mass Campaigns - Represents the total number of mass campaigns that ran in the quarter under consideration

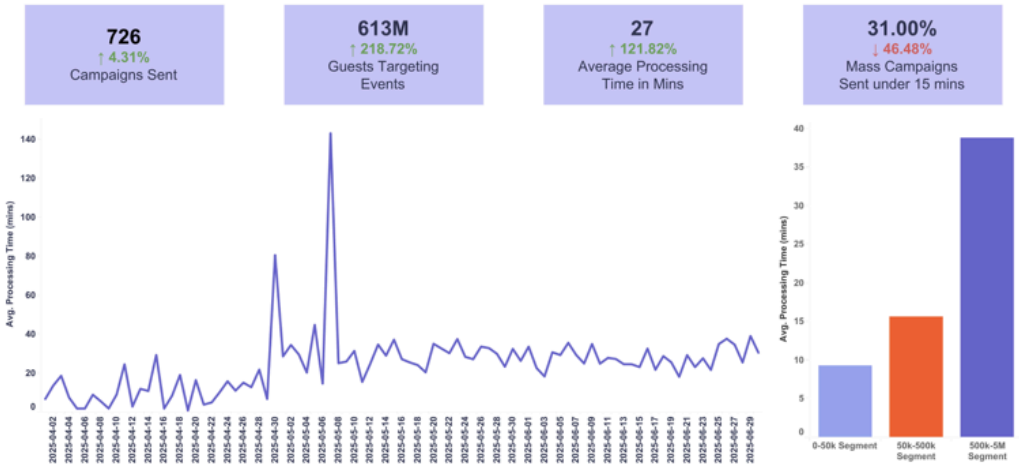
Other Active Campaigns - Represents the total number of campaigns (other than Mass Gifting) that was active (targeted at least one user) in the quarter under consideration

Redeemables Sent through Campaigns - Represents the total number of rewards disbursed through campaigns in the quarter under consideration

Coupon Codes Generated - Represents the total number of coupon codes generated in the quarter under consideration

Direct Gifts sent to Guests - Represents the total number of rewards disbursed through Admin gifting in the quarter under consideration

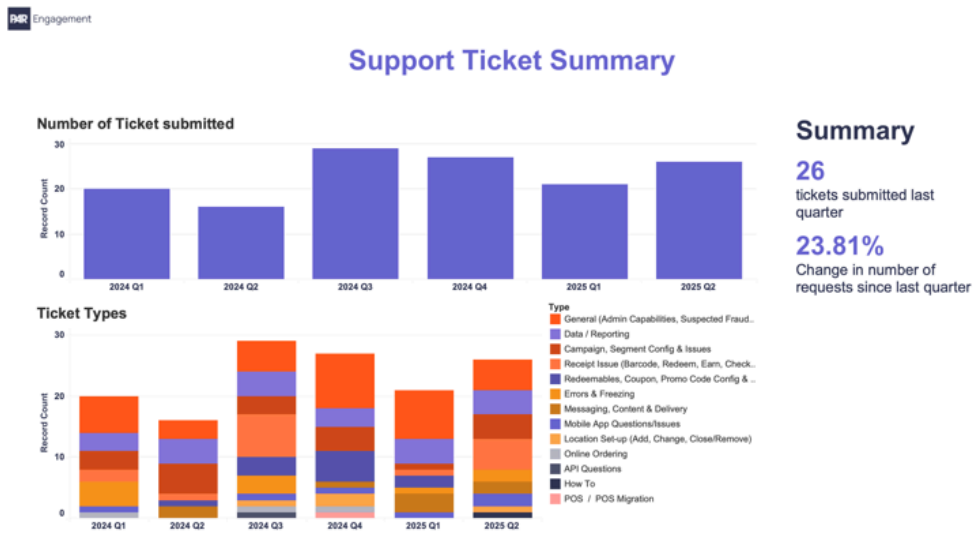
Platform: Technical Performance (Mass Campaigns)



Campaigns Sent - Represents the number of Mass campaigns that ran in the quarter under consideration

Guests Targeting Events - Represents the total number of targeting events through Mass campaigns that ran in the quarter under consideration. For example, if a Mass campaigns targeted a user two times, that is counted as two.

Support ticket Metrics



Number of Ticket Submitted: The total count of tickets submitted over the last 6 quarters.

Ticket Type: Breakdown of total tickets submitted, categorized by ticket type.

Appendix: Online Metrics

	2024 Q2	2024 Q1	2023 Q2	QoQ	YoY
Online Loyalty Sales	$2,355,065.22	$2,087,661.11	$1,888,821.24	12.81%	24.68%

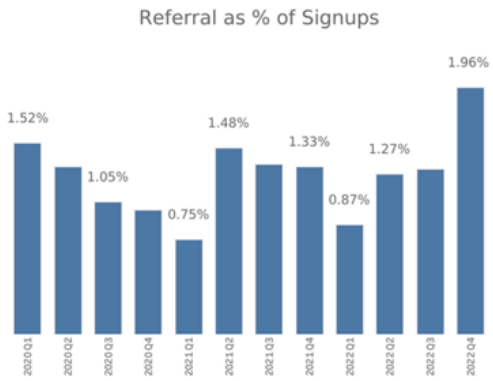
Additional Referral Transactions	3,571	3,515	3,569	1.59%	0.06%
Additional Sales	$49,580.83	$58,670.99	$53,649.77	-15.49%	-7.58%
Referrals - Avg Additional Spend/User	$28.19	$47.05	$34.04	-40.09%	-17.20%
Referrals - Avg Check Size First Transaction	$11.66	$16.53	$14.97	-29.45%	-22.08%



Referrals: The number of new users as a result of a direct referral from an existing customer. If A refers B, then B is considered referral when B does a loyalty checkin.

This represents total new referrals added within the quarter.

Referral Revenue: Total revenue generated by the referred users (B) on their first visit

Additional Checkins: Total number of loyalty checkins made by the referred users (B) in the specified duration

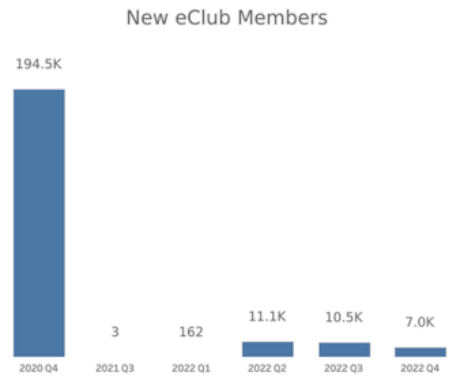
Average Additional Checkins Per User: Average number of loyalty checkins per user made by the referred users (B) in the specified duration

Additional Spend: Total net spend through loyalty transactions made by the referred users (B) in the specified duration

Average Additional Spend Per User: Average net spend through loyalty transactions per user made by the referred users (B) in the specified duration

Slide

	2022 Q4	2022 Q3	2021 Q4	QoQ	YoY
New eClub Members	6,977	10,513		-33.63%	0.00%
Converted to Loyalty	961	1,113	992.0	-13.66%	-3.13%
Avg. Check Size of Converted Users	$16.54	$16.92	$16.87	-2.26%	-1.96%
Total Spend of Converted Users	$105,813.18	$97,500.73	$70,914.39	8.53%	49.21%



Quarter

Total eClub Users: Number of users who were created during the quarter under consideration, with signup channel as eClub. Some of these users may have become loyalty users, while others haven't yet

Members converted to Loyalty: Number of eClub users who signed up for loyalty during the quarter under consideration irrespective of when the user was created

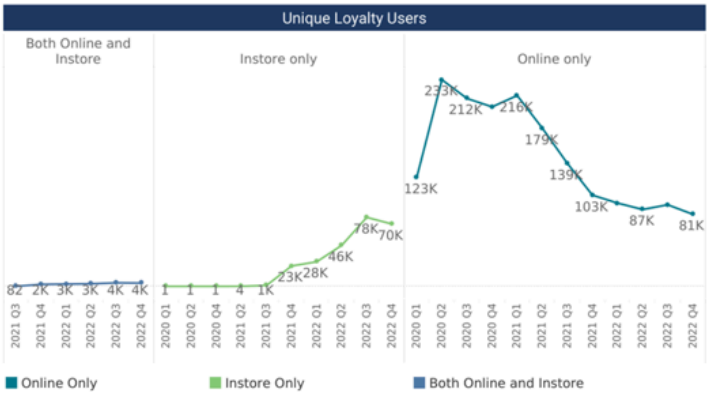
Loyalty Checkins: Total number of approved loyalty checkins made during the quarter under consideration, by eClub users (who signed up for loyalty). These checkins are made by all eClub users (who signed up for loyalty) and not just the ones who converted to loyalty in this quarter

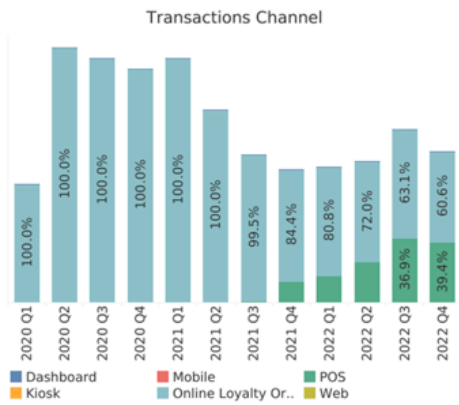
Total Spend: Total spend through approved loyalty checkins made during the quarter under consideration, by eClub users (who signed up for loyalty). This number is based on checkins made by all eClub users (who signed up for loyalty) and not just the ones who converted to loyalty in this quarter

Average Check: Average spend per transaction through approved loyalty checkins made during the quarter under consideration, by eClub users (who signed up for loyalty). This number is based on checkins made by all eClub users (who signed up for loyalty) and not just the ones who converted to loyalty in this quarter

Average Spend: Average spend per user through approved loyalty checkins made during the quarter under consideration, by eClub users (who signed up for loyalty). This number is based on checkins made by all eClub users (who signed up for loyalty) and not just the ones who converted to loyalty in this quarter

Slide





The metric can be changed in these charts. Download additional charts as needed

Order Type : Order type can be either Online or POS or Both (that includes POS and Online)

•**Online Only:** The number of users who have done only online loyalty checkins

•**POS Only:** The number of users who have done only POS loyalty checkins.

•**Both :** The number of users who have done at least one checkin on Online and at least one checkin on POS

The bar chart represents the visits by channel

•**Mobile:** The number of visits via mobile app (scanned barcode)

•**Online Order:** The number of visits via Online order through app or web when logged in as a loyalty user

•**POS:** The number of visits at POS - scanner or phone number earn via lookup

•**Web:** The number of visits earned through Web / iFrame

Slide

	2022 Q4	2022 Q3	2021 Q4	QoQ	YoY
Online Loyalty Sales	$3,434,565.88	$4,137,778.02	$4,418,673.60	-16.99%	-22.27%
Online Loyalty Orders	150,284	179,833	185,109	-16.43%	-18.81%
Online Avg. Check Size	$22.85	$23.01	$23.87	-0.67%	-4.26%
Online Unique Users	85,070	96,119	105,147	-11.50%	-19.09%
Online Loyalty Orders (% of Total Orders)	60.62%	63.15%	84.44%	-4.00%	-28.21%
Online Loyalty Sales (% of Total Sales)	57.93%	61.67%	81.16%	-6.06%	-28.62%

Online Loyalty Checkins %: Percentage of total number of transactions made by loyalty users towards online orders for which they have earned points/punches in the specified duration.

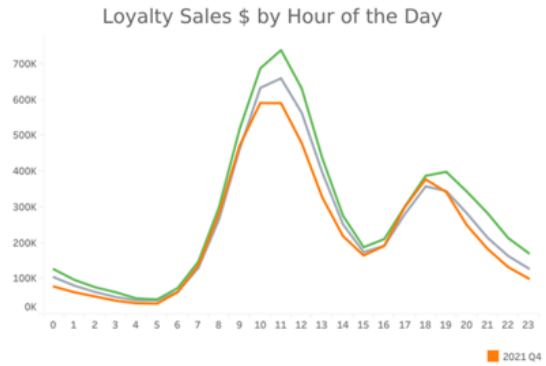
Online Loyalty Sales %: Percentage of total loyalty sales made by loyalty users made towards online orders for which they have earned points/punches in the specified duration.

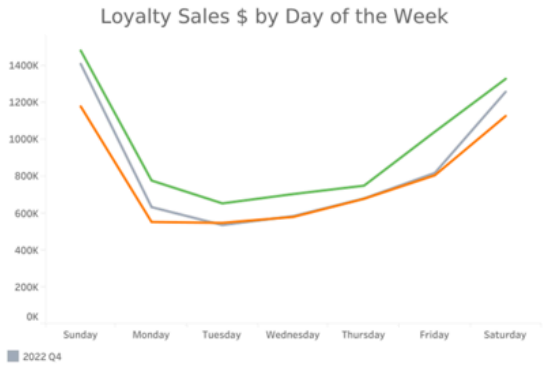
Online Orders: Count of transactions made by the user through online channel at that location.

Online sales : Sales generated by the online orders for this location.

Online Check: Online Sales/Online Orders

Slide





Graph represents number of loyalty visits by day of week as well as hour of day to understand visit pattern of loyalty users

Note:

1.This graph is NOT on user checkin date/ scan date. This is on receipt date, i.e., when user made purchase.

2.Visits calculations are based on location specific time zone and NOT UTC time zone.

Slide

This graph represents number of honored redemptions on each day of the quarter by day of week.

•The dark color which is highlighted shows the spikes in honored redemptions on a particular day. It could be due to a campaign or activity run on that day(s)

•The line below the heat map shows the range of honored redemptions in the duration

•It also includes user coupon redemptions

Slide

	2022 Q4	2022 Q3	2021 Q4	QoQ	YoY
Total Discounts	1,869,098	876,795	686,853	113.17%	172.12%
Discount Rate %	31.53%	13.07%	12.62%	141.25%	149.89%
Honored Redemptions	330,148	177,638	142,297	85.85%	132.01%
Online Redemptions	89,170	79,334	56,934	12.40%	56.62%
Redemption Rate	0.05%	61.26%	92.08%	-99.92%	-99.95%

Honored Redemptions: Total number of processed redemptions via user that includes card completion, campaign rewards, banked rewards, etc. It also include user coupon redemptions attached to the user.

Note*: A Forced redemption is not counted as an Honored Redemption. However, if you select "Business Type" as "Image", Expired Rewards are also counted, which covers Forced redemptions.*

Discount Rate %: Ratio of the discounts given to loyalty user and the loyalty sales made by the user in the specified duration. (Includes discounts from Loyalty, Campaign, Promo, Coupons and Others. Types include discounts from Redeemable rewards, Banked Currency, Fuel Discounts and Subscription Discounts)

Redemption rate : Honored rewards/ Rewards gifted

Note:

- *Redemption Rate has a numerator (redemptions) and denominator (rewards)*
- *In the context of Redemption Rate, we consider only the rewards that redeemed in one shot - for example Free Bogo. We do not consider points, currency etc. which can be redeemed in parts*
- *Therefore banked currency for point based currency is out (not considered)*
- *Now, when it comes to point unlock redeemables, there is no reward created - when a user redeems the points, it gets redeemed directly. It doesn't go into the rewards account. Therefore, the core program rewards for point unlock redeemables is not considered*
- *The redemption rate calculation also doesn't consider promos and coupon cases (neither in numerator nor in denominator) where the promo/coupon code is generally available for anyone to redeem (pre generated and redeemed at pos type of Promos and Coupons), and is not disbursed to a specific user.*
- *And as for the numerator, we only consider redemptions tied to the rewards in the denominator (which follows the considerations mentioned above)*

Customer avg check behavior cohort: Average loyalty visits made by loyalty users who visited in particular quarter and their checkin behavior in the following quarters as compared to previous quarter.

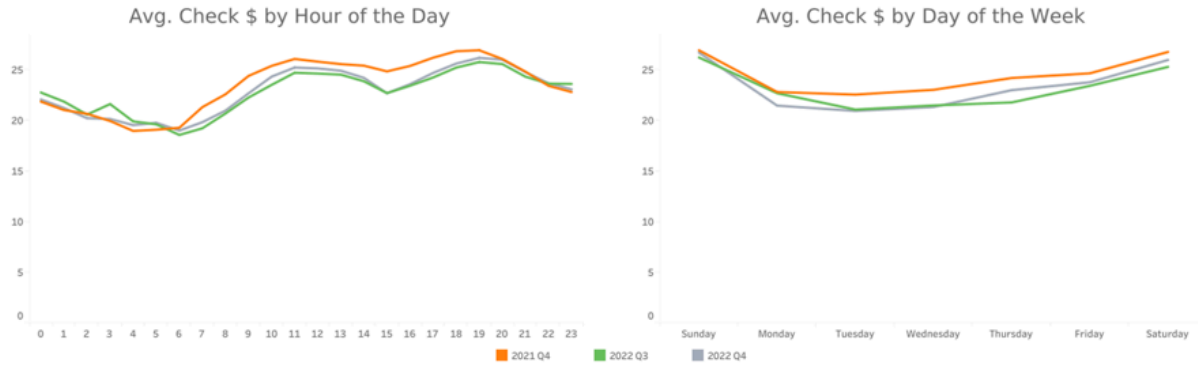
Year/Quarter of Customer acquisition date: date when a loyalty user made first loyalty check-in (and not based on signup)

Slide

This graph represents number of average spend on each day of the quarter by day of week.

•The dark color which is highlighted shows the spikes in average spend on a particular day. It could be due to a campaign or activity run on that day(s)

Slide



Graph represents number of loyalty visits by day of week as well as hour of day to understand visit pattern of loyalty users

Note:

1.This graph is NOT on user checkin date/ scan date. This is on receipt date, i.e. when user made purchase.

2.Visits calculations are based on location specific time zone and NOT UTC time zone.

Benchmark Calculations

Here is how Benchmarks are calculated:

Currently, the calculation used for arriving at quartiles (0 percentile, 25percentile, 50th percentile, 75th percentile and 100th percentile) uses a method that calculates these values using a distribution.

This results in benchmarking values, that are not actually real (but somewhere in between the actual values).

For example, in order to calculate DISCOUNT RATE for Fast Casual - 500+ in 2024Q3, there are 4 businesses in the Cohort.

BUSINESS_UUID	START_DATE	DISCOUNT_RATE
McAlister,Äôs	2024-07-01	0.10855221
Charleys	2024-07-01	0.10352384
Moe's Southwest Grill	2024-07-01	0.17064747
Chuck E. Cheese	2024-07-01	1.77447996

When we try to calculate quartiles using Gaussian distribution, we end up with following result:

cohort_name	metric_name	metric_value	percentile	period
Fast Casual_500+	DISCOUNT_RATE	0.10352384	0%	2024-07-01
Fast Casual_500+	DISCOUNT_RATE	0.10729512	25%	2024-07-01
Fast Casual_500+	DISCOUNT_RATE	0.13959984	50%	2024-07-01

Fast Casual_500+	DISCOUNT_RATE	0.5716056	75%	2024-07-01
Fast Casual_500+	DISCOUNT_RATE	1.77447996	100%	2024-07-01

We can see that the 75th percentile increased to 57%, which is between the third and fourth biggest values, but does not reflect a real value.

The reason why we use distribution, instead of actual values is to avoid cases where brand users can guess the actual underlying brand, in case the cohort size is too small as shown in the above example.

Benchmarking Metrics Tracked

Here are the benchmarking metrics that are tracked

KPI	Value type that is tracked
Avg. Visits	Absolute value (Actual value)
Retention Rate	Absolute value (Actual value)
Signup to First Visit Percentage	Absolute value (Actual value)
First Visit to Second Visit Percentage	Absolute value (Actual value)
Second Visit to Third Visit Percentage	Absolute value (Actual value)
Third Visit to Fifth Visit Percentage	Absolute value (Actual value)
Fifth Visit to Tenth Visit Percentage	Absolute value (Actual value)
Days between Signup to First Visit	Absolute value (Actual value)
Days between First to Second Visit	Absolute value (Actual value)
Days between Second to Third Visit	Absolute value (Actual value)
Days between Third to Fifth Visit	Absolute value (Actual value)
Days between Fifth to Tenth Visit	Absolute value (Actual value)

Participation Rate	Absolute value (Actual value)
Spend Lift	Absolute value (Actual value)
Redemption Rate	Absolute value (Actual value)
Discount Rate	Absolute value (Actual value)
Online Sales as % of Loyalty Sales	Absolute value (Actual value)
Signups	QoQ Change
Unique Users	QoQ Change
Avg. Check Size	QoQ Change
Referral as % of Signup	Absolute value (Actual value)
Frequency Cohort - % Unique Guests with 1 Checkin	Absolute value (Actual value)
Frequency Cohort - % Unique Guests with 2-3 Checkins	Absolute value (Actual value)
Frequency Cohort - % Unique Guests with 4-6 Checkins	Absolute value (Actual value)
Frequency Cohort - % Unique Guests with 7-10 Checkins	Absolute value (Actual value)
Frequency Cohort - % Unique Guests with 11 and more Checkins	Absolute value (Actual value)
Active 30 days %	Absolute value (Actual value)
Active 90 days %	Absolute value (Actual value)
Active 180 days %	Absolute value (Actual value)
Active 365 days %	Absolute value (Actual value)
Loyalty Transactions	QoQ Change
Loyalty Sales	QoQ Change
