		Segment	
Charts/Metrics	Overall performance	Habitual guests (latest month)	10.86% ↓20.3% vs Bikky benchmark

	Habitual guests are guests that have demonstrated a consistent habit (quartery, monthly; weekly, or daily) for some period of time.		
		Habitual guests (YoY)		Performance by lifecycle and frequency status over time	Guests by lifecycle and frequency over time	first time, onboarding, irregular, re-onboarding, quarterly, monthly, weekly and daily 		Revenue by lifecycle and frequency over time	first time, onboarding, irregular, re-onboarding, quarterly, monthly, weekly and daily 		Latest month performance	• Percentage of guests by category (habitual vs non-habitual) 
			• Number and percentage of unique guest by lifecycle and frequency, and YoY change
		Performance by lifecycle and frequency for all time	Unique guests versus revenue in percentage 	Behavior comparisons *Lifecycle + frequency compared to Lifecycle + frequency i.e.: weekly vs first time*	Orders by month	
		Orders by daypart			Orders by source and fulfillment method	

Churn

This dashboard can help you understand how guests chum, and what guests are at risk of churning. All of the data is filtered to engaged guests. If a guest fails to return after placing a handful of orders, that's not really a churn problem, it's an onboarding problem. All of the data is also delayed by 90-120 days since it can take that long before we know if someone is late or churned.

Section	Subsection	Contains	Values/Example

Filters		Date	On or after 2 years ago (2022)
		Daypart	
		Loyalty status	(2) True, False
		Location group	-

Charts/Metrics	Overall performance	Late guests (latest month) *The Late guests metric measures what percentage of guests from a given month have not returned before their Predicted next order date. The Predicted Next Order Date is personalized for each guests and is typically 30-90 days after their last order. Late guests are*	

		at risk of churning.	
		Late guests			Churned guests (latest month) *The Churned guests metric measures what percentage of guests from a given month have not returned before their Churn threshold. The Churn Threshold is personalized for each guest but is typically 90-120 days after their last order. Churned guests are very unlikely to return.*			Churned guests	
	Performance by dimension *This section allows you to understand how different dimensions (like Location, Order Frequency, Source, etc.) correlate to churn. At the moment we are only looking at the most frequent dimension for a guest in a given month.*	Average churned guests by dimension (Order frequency)			Churned guests by dimension (Order frequency)			Churn by dimension		Performance by seasonality and	Daypart + day of week vs brand	

	channel *This section allows you to quickly understand how churn differs depending on the Daypart, Day of Week, Source, and Fulfillment Method. The figure you see below is the percent diference vs the brand-average churn rate.*	avg churn rate	
		Source + fulfillment method vs brand avg churn rate	
	Performance by menu item *This section allows you to understand how likely a guest is to churn if they ordered a specific menu item. For each customer in a given month, we focus only on the most frequent*	Churn by most frequent item	

	item they ordered, and whether or not they went on to churn. We only show the top 20 items based on average monthly guest volume, and we exclude quarteny guests since tnose tend to churn at a much nigher rate tan otner engaged guests.		
	Guests *This section allows you to explore the behavior of individual guests. All of this data is based on behavior and events that match the report's global filters, including dates. For each dimension (like Source. Fulfillment Method. etc) we are showing their typical or most frequent behavior*	Guests	

Latency

Latency (or Visit Latency) refers to the number of days between consecutive visits for a guest. It's essentially the gap, or interval, between visits.

Section	Subsection	Contains	Values/Example

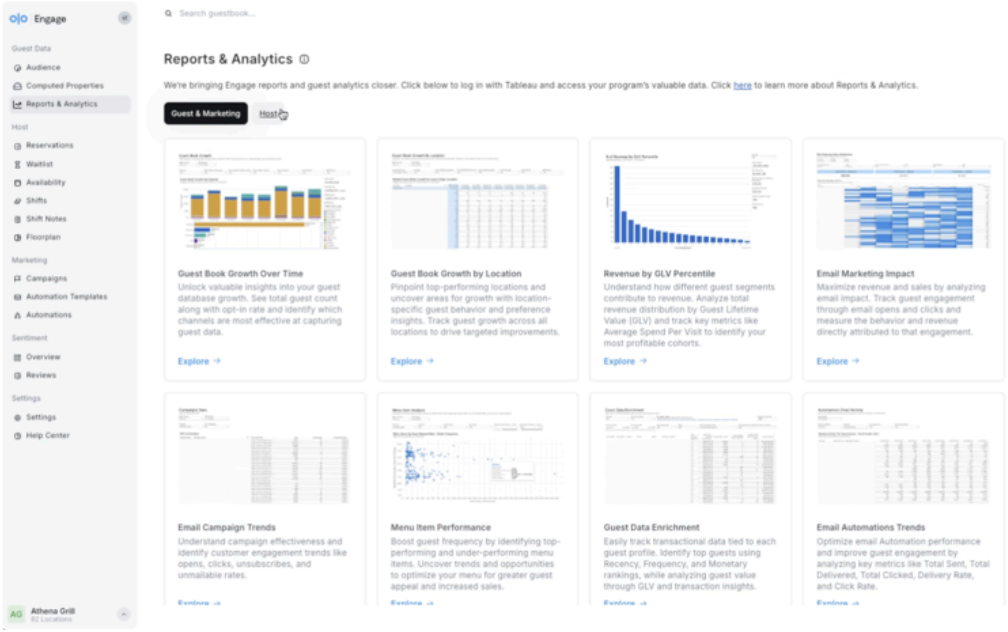
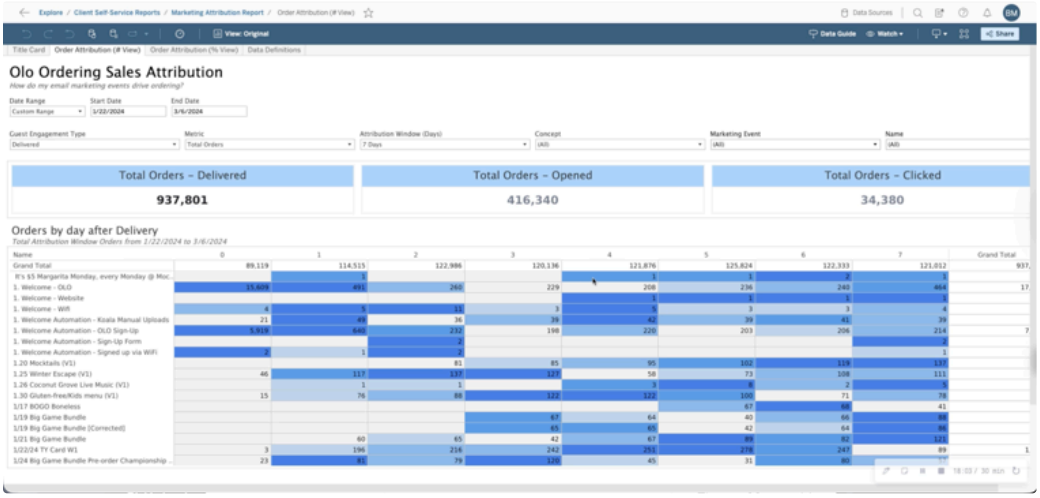
Olo Engage

Reports & Analytics

Olo Engage is using Tableau to show data for every of metrics below.





Email Marketing Impact

Metric	Description	Image
Guest Book Growth Over Time	Unlock valuable insight into your guest database growth. See total guest count along with opt-in rate and identify which channels are most effective at capturing guest data	Guest Book Growth by Location	Pinpoint top-performing locations and uncover areas for growth with location-specific guest behavior and preference insights. Track guest growth across all locations to drive targeted improvements.	

Revenue by GLV Percentile	Understand how different guest segments contribute to revenue. Analyze total revenue distribution by Guest Lifetime Value (GLV) and track key metrics like Average Spend Per Visit to identify your most profitable cohorts.	Email Marketing Impact	Maximize revenue and sales by analyzing email impact. Track guest engagement through email opens and clicks and measure the behavior and revenue directly attributed to that engagement.	
Email Campaign Trends	Understand campaign effectiveness and identity customer engagement trends like opens, clicks, unsubscribes, and unmailable rates.	

Menu Item Performance	Boost guest frequency by identifying top-performing and under-performing menu items. Uncover trends and opportunities to optimize your menu for greater guest appeal and increased sales.	
Guest Data Enrichment	Easily track transactional data tied to each quest profile. Identity top guests using Recency, Frequency, and Monetary rankings, while analyzing guest value through GLV and transaction insights.	Email Automations Trends	Optimize email Automation performance and improve guest engagement by analyzing key metrics like Total Sent, Total Delivered, Total Clicked, Delivery Rate, and Click Rate.	
SMS Campaign Trends	Drive better SMS engagement by understanding net growth over time. Measure subscriber growth, identify campaigns leading to	

	unsubscribes, and optimize your SMS marketing strategy.
